COMMISSIONING PIPELINES

Commissioning services are tailored to meet clients' individual project needs according to pipeline materials and location.

Global Remote Technologies offers a number of general pipeline commissioning services that can be customized according to the customer's product materials and pipeline location. Once a pipeline passes a given number of inspection tests, it is ready for use and can begin transporting product.

GRT's skilled and experienced team members have spent countless hours developing specialized procedures to ensure the commissioning stage is completed safely and efficiently. GRT's staff has a long history of effectively adapting testing methods to the specialized demands of the pipeline owner.

The pre-commissioning services offered by GRT as part of the thorough inspection process are:

- ▶ Welding Records Review
- ▶ Material Records Review
- ▶ Coating Records Review
- ▶ Location Inspection (as-built records review)
- ▶ Cleanliness Inspection
- ▶ Out-of-roundness Inspection
- ▶ Strength Test
- ▶ Tightness Test
- ▶ Stress Test
- ▶ Baseline surveys on wall thicknesses, to allow any new damage to be easily identified
- ▶ Moisture Level Inspection
- ▶ Function Inspection, Including Valves, Regulators and Measurement Systems
- ▶ Cathodic Protection
