WITSML SOLUTIONS

The WITSML Data Aggregator and the WITSML Server are a customized data logging system that amasses and centrally stores information from field locations and rig sites.

WITSML Data Aggregator

Built for the purpose of acquiring data, the Data Aggregator is sturdy and rugged, features a built in surge protector and router, an LCD screen, and multiple serial and local network port. Clients can collect and distribute data from various on-site service companies and aggregate the data to centralized storage. Its plug-and-play embedded design allows easy deployment at the rig site. Centralized configuration management make the Data Aggregator the right solution for data collection.

WITSML Server

Global Remote Technologies provides a Polaris WITSML Server that aggregates a comprehensive set of data objects on a fully scalable platform. Supporting cloud or in-house hosting, and offering customizable available object selection, fine-grained access control, and full conformance to WITSML 1.3.1.1, the high performance WITSML Server provides unparalleled support for customization.
